Profile

Full-stack Software Developer with 2.5+ years of experience building and scaling production-grade web applications. Strong expertise in modern frontend frameworks and backend systems, with end-to-end ownership of features from design to deployment. Proven ability to deliver scalable, maintainable solutions in fast-paced agile environments.

Technical Skills

Frontend: React, Next.js, TypeScript, JavaScript, Redux, TanStack Query, Tailwind CSS, Material UI, Shadcn, HTML5, CSS3
Backend: Node.js, Express.js, REST APIs, Authentication, Authorization, RBAC, MongoDB
Cloud & DevOps: AWS, Docker, GitHub Actions, CI/CD Pipelines
Tools & Platforms: React Native, Git, VSCode, Postman, Swagger, Jira, Trello, Figma

Experience

Software Developer *Sept 2024 – Present*
Fiftyfive Technologies, Jaipur

- Built and scaled full-stack web applications using React, Next.js, Node.js, Express for internal and client-facing platforms.
- Owned end-to-end feature lifecycle including requirement analysis, system design, development, testing, and production deployment.
- Designed and implemented robust REST APIs with validation, error handling, and security best practices, improving system reliability.
- Developed reusable and modular UI components using Tailwind CSS, Material UI, and Shadcn, accelerating frontend development.
- Optimized data fetching and state management using React Query and Axios, improving performance and user experience.
- Contributed to sprint planning, code reviews, and technical discussions, enhancing code quality and team efficiency.

Software Developer *Feb 2024 – Aug 2024*
Holesail

- Developed decentralized web applications in a P2P architecture using Node.js and React.
- Contributed to core networking features enabling secure peer-to-peer communication.

Tech Projects

Holesail

- Built a Node.js package enabling secure tunneling of localhost ports to global access via client-server architecture.
- Enabled peer-to-peer connectivity without exposing IP addresses, bypassing firewall restrictions.
- **Tech Stack:** React.js, Tailwind CSS, Node.js, HyperDHT

Hypercompute

- Developed a decentralized GPU marketplace for remote compute access using reverse tunneling.
- Designed Docker-based isolated Ubuntu environments, eliminating dependency on centralized cloud infrastructure.
- Enabled cross-machine hardware sharing, improving resource utilization and accessibility.
- **Tech Stack:** React.js, Node.js, Docker, HyperDHT, xterm.js

Education

B.K. Birla Institute of Engineering and Technology, Pilani 2020 – 2024
Bachelor of Technology in Computer Science & Engineering CGPA: **8.8 / 10**

Achievements

- **Performance Excellence Award (3x)** — Recognized for delivering high-impact features and demonstrating strong technical ownership.
- **1st Position** — SIH Internal Hackathon 2023 , Code Cubical Hackathon (2200+ participating teams).
